IDEM Incident # 0000198
IDEM VRP # 6061202
MUNDELL Project No. M01046

Dear Ms. Anderson:

This *Quarterly Monitoring Progress Report* is being submitted to the Indiana Department of Environmental Management (IDEM) by MUNDELL & ASSOCIATES, INC. (MUNDELL), on behalf of AIMCO Michigan Meadows Holdings, LLC (AMMH), to summarize further site characterization, remediation activities and quarterly monitoring performed from October 1 through December 31, 2011. The following sections provide detailed discussions of the results of this work. All activities were completed on schedule.

GROUNDWATER MONITORING NETWORK SAMPLING

During October 18 - 24, 2011, quarterly groundwater sampling of the existing twenty-two (22) monitoring wells established with IDEM, seven (7) additional MUNDELL monitoring wells on the Floral Park Cemetery property, and one (1) Keramida/Environ monitoring well was performed. The following constitute this quarterly groundwater monitoring network:

- 1.) *Twenty-nine (29) MUNDELL monitoring wells:* MMW-1S, MMW-8S, MMW-9S, MMW-10S, MMW-11S, MMW-11D, MMW-12S, MMW-13D, MMW-14D, MMW-P-01, MMW-P-02, MMW-P-03S, MMW-P-03D, MMW-P-04, MMW-P-05, MMW-P-06, MMW-P-07, MMW-P-08, MMW-P-09S*, MMW-P-09D*, MMW-P-10S, MMW-P-10D, MMW-P-11S*, MMW-P-12S, MMW-P-12D, MMW-P-13S*, MMW-P-13D*, MMW-C-01* and MMW-C-02*.

NOTE: * indicates MUNDELL monitoring wells located on the Floral Park Property).

2.) One (1) Keramida/Environ monitoring well: MW-168D.

MUNDELL also measured static groundwater elevations via an electric oil/water interface probe from the above listed monitoring well network. Additional wells gauged during this sampling event consist of: MMW-2S, MMW-3S, MMW-4D, MMW-5D, MMW-6D, MMW-7S, MW-167S, MW-167D, MW-168S, MW-169S, MW-170S, MW-170D, MW-171S and MW-171D. All monitoring well locations are presented on **Figure 1**.

Monitoring well sampling, survey and construction data are provided in **Table 1**, and the shallow potentiometric surface map is illustrated on **Figure 2**. Groundwater elevations collected from monitoring wells screened in the deeper saturated unit were not included in the calculation of the shallow potentiometric surface.

The wells were sampled utilizing both dedicated and portable bladder pumps for uniform low-flow purging and sample collection. The Troll 9500 multi-parameter meter (used inline with the bladder pumps) logs geochemical parameters (temperature, pH, dissolved oxygen, conductivity and oxidation-reduction potential), which help remove a minimal but sufficient amount of water (indicated by stabilization of geochemical parameters) to sample the well. The Troll helps assess the geochemical parameters to determine if conditions naturally conducive to natural attenuation exist in the aquifer. All excess purge water was transported to 55-gallon drums located at the Site for proper disposal. In accordance with IDEM guidelines, the contents in each drum were then identified with a label describing them as non-hazardous materials.

As agreed in the October 29th, 2008, meeting with IDEM and detailed in the *Remediation Work Plan Addendum* November 2008, groundwater samples were submitted to Pace Analytical Laboratories (Pace) in Indianapolis, Indiana, for the shorter list of Volatile Organic Compound (VOC) analysis via U.S. EPA SW-846 Method 8260, along with appropriate duplicate (DUP), matrix spike (MS) and matrix spike duplicate (MSD). Groundwater samples were transferred into three 40-milliliter glass sample vials containing the preservative hydrochloric acid (HCl). Groundwater sample vials were sealed in plastic bags and placed in a cooler containing ice and delivered to Pace using appropriate chain-of-custody protocol for laboratory tests. Pace laboratory certificates of analysis for the groundwater samples analyzed are presented in **Appendix A**. The cumulative groundwater analytical data for enhanced anaerobic bioremediation are included in **Table 4**. The data show that anaerobic conditions which support the reductive dechlorination process currently exist in the aquifer.

Additional aquifer parameters, consisting of nitrate/nitrite, sulfate, ferrous iron, total organic carbon, methane, ethene and ethane were analyzed to evaluate indicator compound breakdown and redox-sensitivity. In addition, volatile fatty acids (VFA) were tested to evaluate substrate distribution and lifetime duration of the product. These samples were collected in the previously selected indicator well locations representative of each plume to monitor the presence of residual CAP 18 METM in the aquifer and to provide additional monitoring of aquifer conditions. These identified locations consist of:

- Source Area A:** MMW-P-02, MMW-P-03S, MMW-P-03D, MMW-P-04 and MMW-C-01;
- Source Area B:** MMW-P-01, MMW-P-05, MMW-P-06, MMW-P-07, MMW-P-08, MMW-P-10S, MMW-P-10D and MMW-8S; and
- Source Area C:** MMW-1S, MMW-9S and MMW-10S.

GROUNDWATER ANALYTICAL RESULTS

Groundwater analytical testing results for this quarter are summarized in **Table 2** and presented on **Figure 3**. Two (2) out of the thirty (30) monitoring wells sampled this quarter (MMW-1S and MMW-P-11S) showed PCE concentrations exceeding the IDEM RISC Industrial Default Closure Level (IDCL). Five (5) monitoring wells (MMW-8S, MMW-10S, MMW-P-01, MMW-P-02 and MMW-C-01) demonstrated PCE concentrations exceeding the IDEM RISC Residential Default Closure Level (RDCL) but below the IDCL. The historical groundwater results are included in **Table 3**. The historical indicator compounds trends in groundwater are presented in **Figure 4**.

One (1) monitoring well sampled this quarter showed a TCE concentration exceeding the IDEM RISC IDCL (MMW-1S). One (1) monitoring well (MMW-P-01) exhibited a TCE concentration exceeding the RDCL, but below the IDCL.

Two (2) monitoring wells (MMW-9S and MMW-P-06) showed cis-1,2-DCE concentrations exceeding the IDEM RISC IDCL. Eight (8) monitoring wells (MMW-1S, MMW-10S, MMW-11D, MMW-13D, MMW-14D, MMW-P-01, MMW-P-12S and MMW-P-12D) exhibited cis-1,2-DCE concentrations exceeding the RDCL, but below the IDCL. Eleven (11) monitoring wells (MMW-8S, MMW-11S, MMW-12S, MMW-P-02, MMW-P-03S, MMW-P-04, MMW-P-05, MMW-P-07, MMW-P-08, MMW-168D and MMW-C-01) exhibited cis-1,2-DCE concentrations under IDEM RISC RDCL but above the detection limit.

Twenty-four (24) monitoring wells (MMW-1S, MMW-8S, MMW-9S, MMW-10S, MMW-11D, MMW-13D, MMW-14D, MMW-P-01, MMW-P-02, MMW-P-03S, MMW-P-03D, MMW-P-04, MMW-P-05, MMW-P-06, MMW-P-07, MMW-P-08, MMW-P-09D, MMW-P-10D, MMW-P-12S, MMW-P-12D, MMW-P-13S, MMW-P-13D, MW-168D and MMW-C-01) showed vinyl chloride concentrations exceeding the IDEM RISC IDCL. One (1) monitoring well (MMW-P-11S) exhibited a vinyl chloride concentration exceeding the RDCL, but below the IDCL.

The deep monitoring wells MMW-11D, MMW-13D and MMW-14D exhibited cis-1,2-DCE groundwater concentrations exceeding the RDCL and exhibited vinyl chloride exceedances above IDCLs this quarter. Since these wells have been purposefully located upgradient of all three **Chemical Source Areas**, the impacts observed in these areas demonstrate groundwater impacts that are attributable to other upgradient, off-site sources and not to Michigan Plaza. The locations of all three **Chemical Source Areas** are presented on **Figure 1**. As seen on **Figure 3** the indicator compound concentrations at these deep, upgradient wells can be considered as

“background levels” defined as the concentration of contaminants from the Genuine source coming into the deeper aquifer in this area. These indicator compound levels aid in discerning between the Michigan Plaza source impacts and the Genuine Site impacts, and will ultimately be used to evaluate the target cleanup levels for the deeper portion of the surficial aquifer at the Site.

IN-SITU BIOREMEDIATION PROGRESS

Based upon the 1) extent and severity of the indicator compound concentrations and trends; 2) site-specific operational constraints and uses; 3) geochemical and physical characteristics of the aquifer; and 4) economic factors, in-situ bioremediation with CAP 18TM and CAP 18 METM, followed by Monitored Natural Attenuation (MNA) is the selected remediation technology for the Site for treating groundwater, as detailed in the *RWP*. The initial CAP 18TM injection was performed in each of the three source areas in August 2007 using a direct push Geoprobe system. Locations and spacing of the injection points were designed to address the sewer line related **Chemical Source Areas** and provide injection locations in each **Chemical Source Area**. The anticipated downgradient migration of the initial CAP 18 METM was expected to remediate the most significant groundwater impacts. A booster CAP 18 METM injection was performed in February 2009 to aggressively treat some areas where the chemical concentrations began to stabilize or were decreasing at a slow rate. During this quarter, no additional CAP 18 METM injections have been performed. A *Revised Work Plan for Third Round of CAP 18 METM Injections* dated July 22, 2011, was approved by IDEM on August 22, 2011. MUNDELL will proceed with the third CAP 18 METM event as described in the above referenced *Revised Work Plan*. This injection event has been delayed pending receipt of results from recently completed delineation and investigation activities in the area. MUNDELL expects to receive the results of those activities shortly and plans to proceed with the third CAP 18 METM event in the first quarter of 2012.

Indicator Chemical Trends

A group of monitoring wells from the sampling network is utilized to monitor dissolved indicator compound concentration trends over time at various locations within the heart of the three **Chemical Source Areas**. Graphs of historical PCE, TCE, cis-1,2-DCE and vinyl chloride concentrations are presented in **Figure 4** for the following monitoring wells:

- Source Area A:** MMW-P-02, MMW-P-03S, MMW-P-03D, MMW-P-04 and
MMW-C-01
- Source Area B:** MMW-P-01, MMW-P-05, MMW-P-06, MMW-P-07, MMW-P-08,
MMW-P-10S, MMW-P-10D and MMW-8S
- Source Area C:** MMW-1S, MMW-9S and MMW-10S

Figures 4 and **5** illustrate the changes in the chlorinated solvent concentrations demonstrating reductive dechlorination as a result of the CAP 18 METM remediation implementation. To illustrate the effect of the CAP 18 METM injections on dissolved chlorinated concentrations, injection dates are included on the graphs.

Source Area A

PCE concentrations below the detection limit were observed in three (3) indicator wells (MMW-P-03S, MMW-P-03D and MMW-P-04) located near **Source Area A**. One monitoring well (MMW-C-01) exhibited a PCE concentration exceeding the RDCL, but below the IDCL. One monitoring well (MMW-P-02) exhibited a PCE concentration above the detection limit. A slight increase in PCE groundwater concentration was noted in MMW-P-02 during the 4th quarter, 2011. In general, PCE concentrations have declined steadily since the initial August 2007 CAP 18TM injections and the following February 2009 CAP 18 METM injections. However, the PCE concentration at MMW-C-01 remains in excess of the RDCLs.

Cis-1,2-DCE concentrations demonstrate a slight decrease in the shallow saturated zone immediately downgradient of **Source Area A** (MMW-P-02 and MMW-P-04). However, all five (5) associated indicator wells (MMW-P-02, MMW-P-03S, MMW-P-03D, MMW-P-04 and MMW-C-01) are either non-detect or below all RDCLs during the 4th quarter, 2011.

During the 4th quarter, 2011, vinyl chloride concentrations increased in three (3) **Source Area A** indicator wells located immediately downgradient of **Source Area A** and screened within both the shallow and deep saturated zones (MMW-P-02, MMW-P-03S and MMW-P-03D). Generation of both cis-1,2-DCE and vinyl chloride as byproducts of enhanced reductive dechlorination appear to have slowed near **Source Area A** over the last several quarters. However, increasing vinyl chloride concentrations observed during the 4th quarter in these monitoring wells indicate the continuation of reductive dechlorination processes near **Source Area A**. Rebounding PCE concentrations observed in indicator wells MMW-P-02 and MMW-C-01 indicate the likelihood of a limited PCE source remaining in the vicinity. As such, a third CAP 18 METM injection event has been approved by IDEM and is anticipated to be completed during the 1st quarter, 2012.

Source Area B

PCE concentrations were not detected in indicator wells MMW-P-05, MMW-P-06, MMW-P-07, MMW-P-08, MMW-P-10S and MMW-P-10D located near **Source Area B**. While a decreasing PCE groundwater concentration was observed in MMW-8S during the 4th quarter, 2011, values still remain above the RDCLs in both MMW-8S and MMW-P-01. In general, PCE concentrations have declined steadily since the initial August 2007 CAP 18TM injections and the subsequent February 2009 CAP 18 METM injections.

TCE concentrations were below the detection limit in all **Source Area B** indicator wells during the 4th quarter, 2011, with the exception of MMW-P-01. MMW-P-01 showed an increase in TCE concentrations this quarter and remains above the RDCLs.

Slightly increasing cis-1,2-DCE concentration trends at monitoring well locations MMW-P-01, MMW-P-06 and MMW-8S were observed during the 4th quarter, 2011. MMW-P-06 is the sole monitoring well location with cis-1,2-DCE concentrations in excess of the IDCLs. Increasing Cis-1,2-DCE trends observed in these indicator well locations are likely the result of continuing dechlorination processes in and immediately downgradient of

Source Area B. Groundwater concentrations at indicator well locations MMW-8S, MMW-P-05, MMW-P-08, MMW-P-10S and MMW-P-10D were below RDCLs during 4th quarter, 2011.

Vinyl chloride groundwater concentrations persist downgradient of **Source Area B** ranging between less than 2.0 to 11,300 ug/L. Elevated concentrations were expected at the Site as a direct result of reductive dechlorination processes which were supplemented with CAP 18 ME™ injections in 2007 and 2009. Vinyl chloride concentrations increased in one (1) of the eight (8) identified indicator wells (MMW-8S) this quarter. The maximum observed vinyl chloride concentration at the Site has historically occurred at MMW-P-06. This trend continues during the 4th quarter, 2011, with a vinyl chloride concentration of 11,300 ug/L. The presence of vinyl chloride within the majority of the **Source Area B** indicator well locations indicates that reductive dechlorination processes are proceeding and that vinyl chloride generation continues at a slow rate in this area.

These indicator compound concentration trends in the vicinity of **Source Area B** indicate that reductive dechlorination processes continue to consume PCE while generating daughter products in the saturated zone. In addition, further daughter product breakdown and vinyl chloride generation continues in select downgradient wells as expected. However, PCE concentrations have been unstable over the last four quarters at MMW-P-01, located immediately downgradient of sewer line source areas identified during soil investigation activities completed during 2005. Rebounding PCE concentrations indicate the likelihood of a limited PCE source remaining in the vicinity. As such, a third CAP 18 ME™ injection event has been approved by IDEM and is anticipated to be completed during the 1st quarter, 2012.

Source Area C

PCE concentrations have decreased in all indicator wells located downgradient of **Source Area C** (MMW-1S, MMW-9S and MMW-10S). PCE concentrations at MMW-1S and MMW-10S have decreased but remain above the IDCLs and RDCLs, respectively. No PCE was detected at MMW-9S during the 4th quarter, 2011. Monitoring well locations near **Source Area C** continue to indicate downgradient migration of CAP 18 ME™ and slowing of previously inferred reductive dechlorination processes.

TCE concentrations are below detection limits in two (2) of the **Source Area C** monitoring well locations (MMW-9S and MMW-10S). The TCE concentration at MMW-1S exceeded the RDCLs during the 4th quarter, 2011, yet remained below the IDCLs.

Cis-1,2-DCE concentrations have increased in two (2) of the indicator wells located downgradient of **Source Area C** during the 4th quarter, 2011 (MMW-1S and MMW-9S). Cis-1,2-DCE concentrations remain below IDCLs at two (2) monitoring locations (MMW-1S and MMW-10S) while the concentration in MMW-9S has increased to above the IDCLs this quarter.

Vinyl chloride concentrations have demonstrated generally increasing trends after the second round of CAP 18 ME™ injections in February 2009. While the vinyl chloride concentration

increased slightly in MMW-1S (nearest **Source Area C**), rates of vinyl chloride generation as byproducts of enhanced reductive dechlorination appear to have slowed further downgradient of **Source Area C**. All vinyl chloride concentrations at the **Source Area C** indicator well locations remain above the IDCLs.

The remaining PCE and TCE concentrations observed near **Source Area C**, and the decreasing rates of daughter product generation observed in the vicinity during 2011 indicate the need for a third CAP 18 ME™ injection event. This booster injection event has been approved by IDEM and is anticipated to be completed during the 1st quarter, 2012.

In conclusion, because reductive dechlorination processes appear to have slowed over the last several quarters, as evidenced by slightly rebounding PCE and TCE concentrations and reduced generation of breakdown products (cis-1,2-DCE and vinyl chloride) in selected locations, additional CAP 18 ME™ injections in **Source Areas A, B** and **C** have been approved by IDEM and MUNDELL will proceed with the third CAP 18 ME™ injection event at the Site. The cumulative groundwater analytical data for enhanced anaerobic bioremediation are included in **Table 4**. All groundwater analytical results are attached in **Appendix A**.

INDOOR AIR MITIGATION SYSTEMS PERFORMANCE

Four sub-floor slab depressurization units were installed by *Air Quality Control (AQC)* under the oversight of MUNDELL in September 2006. Three additional sub-floor slab depressurization units were installed by AQC under the oversight of MUNDELL on March 19 and 26, 2008.

Unit/blowers were installed in the following spaces at Michigan Plaza: 1) the Village Pantry (B1); 2) the former Tire Shop space (B2); 3) the Arca de Salvacion (B3); and 4) the laundromat (Michigan Plaza Family Laundry) (B4). The systems installed at the Michigan Apartments are: Building No. 1, Basement Apartment 101 (B5); Building No. 6, Basement Apartment 602 (B6); and Building No. 10, Basement Apartment 1001 (B7). The system locations are illustrated on **Figure 6**.

Since the time of installation, system stack air samples were collected weekly during October 2006, followed by bi-weekly sampling during November and December 2006, monthly throughout 4th quarter, 2006, and then on a quarterly basis thereafter. PID readings have also been concurrently measured in each of the stacks. The historical PCE concentration trends and cumulative pounds of PCE and total contaminants removed by each of the systems (B1 through B7) are summarized in **Figures 7 through 15**.

As of the end of the 4th quarter of 2011, approximately 21.96 pounds of total chlorinated solvents, including 16.91 pounds of PCE, have been removed at the *Michigan Apartments property* (sub slab depressurization systems B5, B6 and B7); and approximately 108.00 pounds of total chlorinated solvents, including 99.91 pounds of PCE, have been removed at the *Michigan Plaza property* (sub slab depressurization systems B1, B2, B3 and B4). The associated calculations are provided in **Appendix B**. A concentration of half the PQL (practical quantitation limit) is assumed for the indicator compounds demonstrating concentrations below the laboratory

PQL, with the exception of vinyl chloride where an average concentration of 0.015 parts per million vapor (PPMV) (derived from the J flag values for vinyl chloride concentrations below PQL) is used for calculation purposes.

Overall, decreases in PCE concentrations have been noted in all mitigation systems going back to at least May 2009. Air mitigation systems B4 and B7 were non-detect for PCE concentrations in vapor during the 4th quarter, 2011, sampling event. PCE concentrations in mitigation systems B1, B2, B3, and B6 have decreased by an order of magnitude since air monitoring was initiated for each respective system. Air mitigation system B5 has also shown generally declining PCE concentrations, with reduction of PCE concentrations by nearly 900 ug/m³ since air monitoring was initiated.

FURTHER INVESTIGATION ACTIVITIES

During the 4th quarter, 2011, MUNDELL completed several further investigation activities as requested by IDEM and outlined in its *Notification of Additional Soil and Groundwater Investigation Activities*, November 30, 2011. This included:

- 1) Installation of one (1) new monitoring well (MMW-C-02D), replacement of one (1) abandoned monitoring well (MMW-P-11DR), and installation of two (2) nested monitoring well sets, one at the northeast corner of the intersection of Holt and Cossell Roads (MMW-P-14S/D), two (2) southwest of the Michigan Plaza (MMW-P-11S/D, MMW-P-13S/D), and one immediately west of Michigan Apartments Building 15 (MMW-15S/D);
- 2) Continuous soil sampling of twelve (12) Geoprobe soil borings, two (2) located west of Michigan Plaza along the sanitary sewer line (GP-30 and GP-31), and ten (10) located within the Floral Park Cemetery south of Cossell Road (GP-20 through GP-29); and
- 3) 2D resistivity and seismic profiles in an east-west direction near the middle of the Michigan Apartments property (to the south of building 15, between buildings 12 and Holt Road).

The results of these additional investigations will be included in a Further Site Investigation report to be issued pending the results of the recent U.S. EPA investigation in the area.

It should be noted that a PCE concentration above the IDCLs (592 ug/L) was observed in MMW-P-11S, located southwest of the Michigan Plaza building on the Floral Park Cemetery property. This monitoring well was installed in September of 2011 and is screened within the shallow portion of the surficial aquifer. No PCE concentrations were observed in the deeper portion of the surficial aquifer unit.

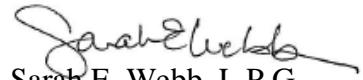

Analytical results from the surrounding shallow monitoring wells relative to MMW-P-11S and the associated **Source Area A** indicate this is a localized area of PCE impacts in groundwater. Monitoring wells to the east (MW-171S), southeast (MMW-C-02 and MMW-P-09S), southwest

(MW-169S) and west (MMW-P-13S and MW-170S) did not contain PCE. In addition, PCE was not present in any wells screened within the deep saturated zone in the vicinity of MMW-P-11S. The upcoming CAP 18 METM injections planned in reference to residual PCE concentrations in ***Source Area A*** will address the limited PCE concentrations remaining in MMW-P-11S and the surrounding area.

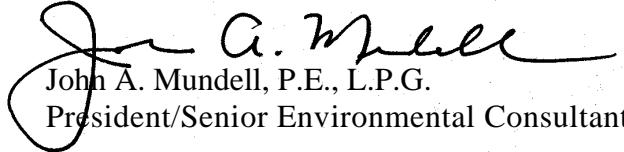

We appreciate the opportunity to update IDEM on the progress of remedial activities and monitoring at the Site. If you have any questions, please do not hesitate to contact us at (317) 630-9060 or via email (jmundell@MundellAssociates.com; swebb@MundellAssociates.com).

Sincerely,

MUNDELL & ASSOCIATES, INC.

PCE = Tetrachloroethene; TCE = Trichloroethene; cis-1,2-DCE = cis-1,2-Dichloroethene; trans-1,2-DCE = tra

Green Shading indicates areas that appear to be undergoing reductive dechlorination due to CAP-18 Injections

"J" designation indicates concentration was estimated due to high volatility.

PCE = Tetrachloroethene; TCE = Trichloroethene; cis-1,2-DCE = cis-1,2-Dichloroethene; trans-1,2-DCE = trans-1,2-Dichloroethene

Green Shading indicates areas that appear to be undergoing reductive dechlorination due to CAP-18 Injections

"J" designation indicates concentration was estimated due to high concentration of one parameter requiring dilution on other parameter quantitations

All analytical results presented in micrograms per liter (ug/L).

PCE = Tetrachloroethene; TCE = Trichloroethene; cis-1,2-DCE = cis-1,2-Dichloroethene; trans-1,2-DCE = trans-1,2-Dichloroethene

Green Shading indicates areas that appear to be undergoing reductive dechlorination due to CAP-18 Injections

"J" designation indicates concentration was estimated due to high concentration of one parameter requiring dilution on other parameter quantitations

All analytical results presented in micrograms per liter (ug/L).

PCE = Tetrachloroethene; TCE = Trichloroethene; cis-1,2-DCE = cis-1,2-Dichloroethene; trans-1,2-DCE = trans-1,2-Dichloroethene

Green Shading indicates areas that appear to be undergoing reductive dechlorination due to CAP-18 Injections

"J" designation indicates concentration was estimated due to high concentration of one parameter requiring dilution on other parameter quantitations

All analytical results presented in micrograms per liter (ug/L).

Notes

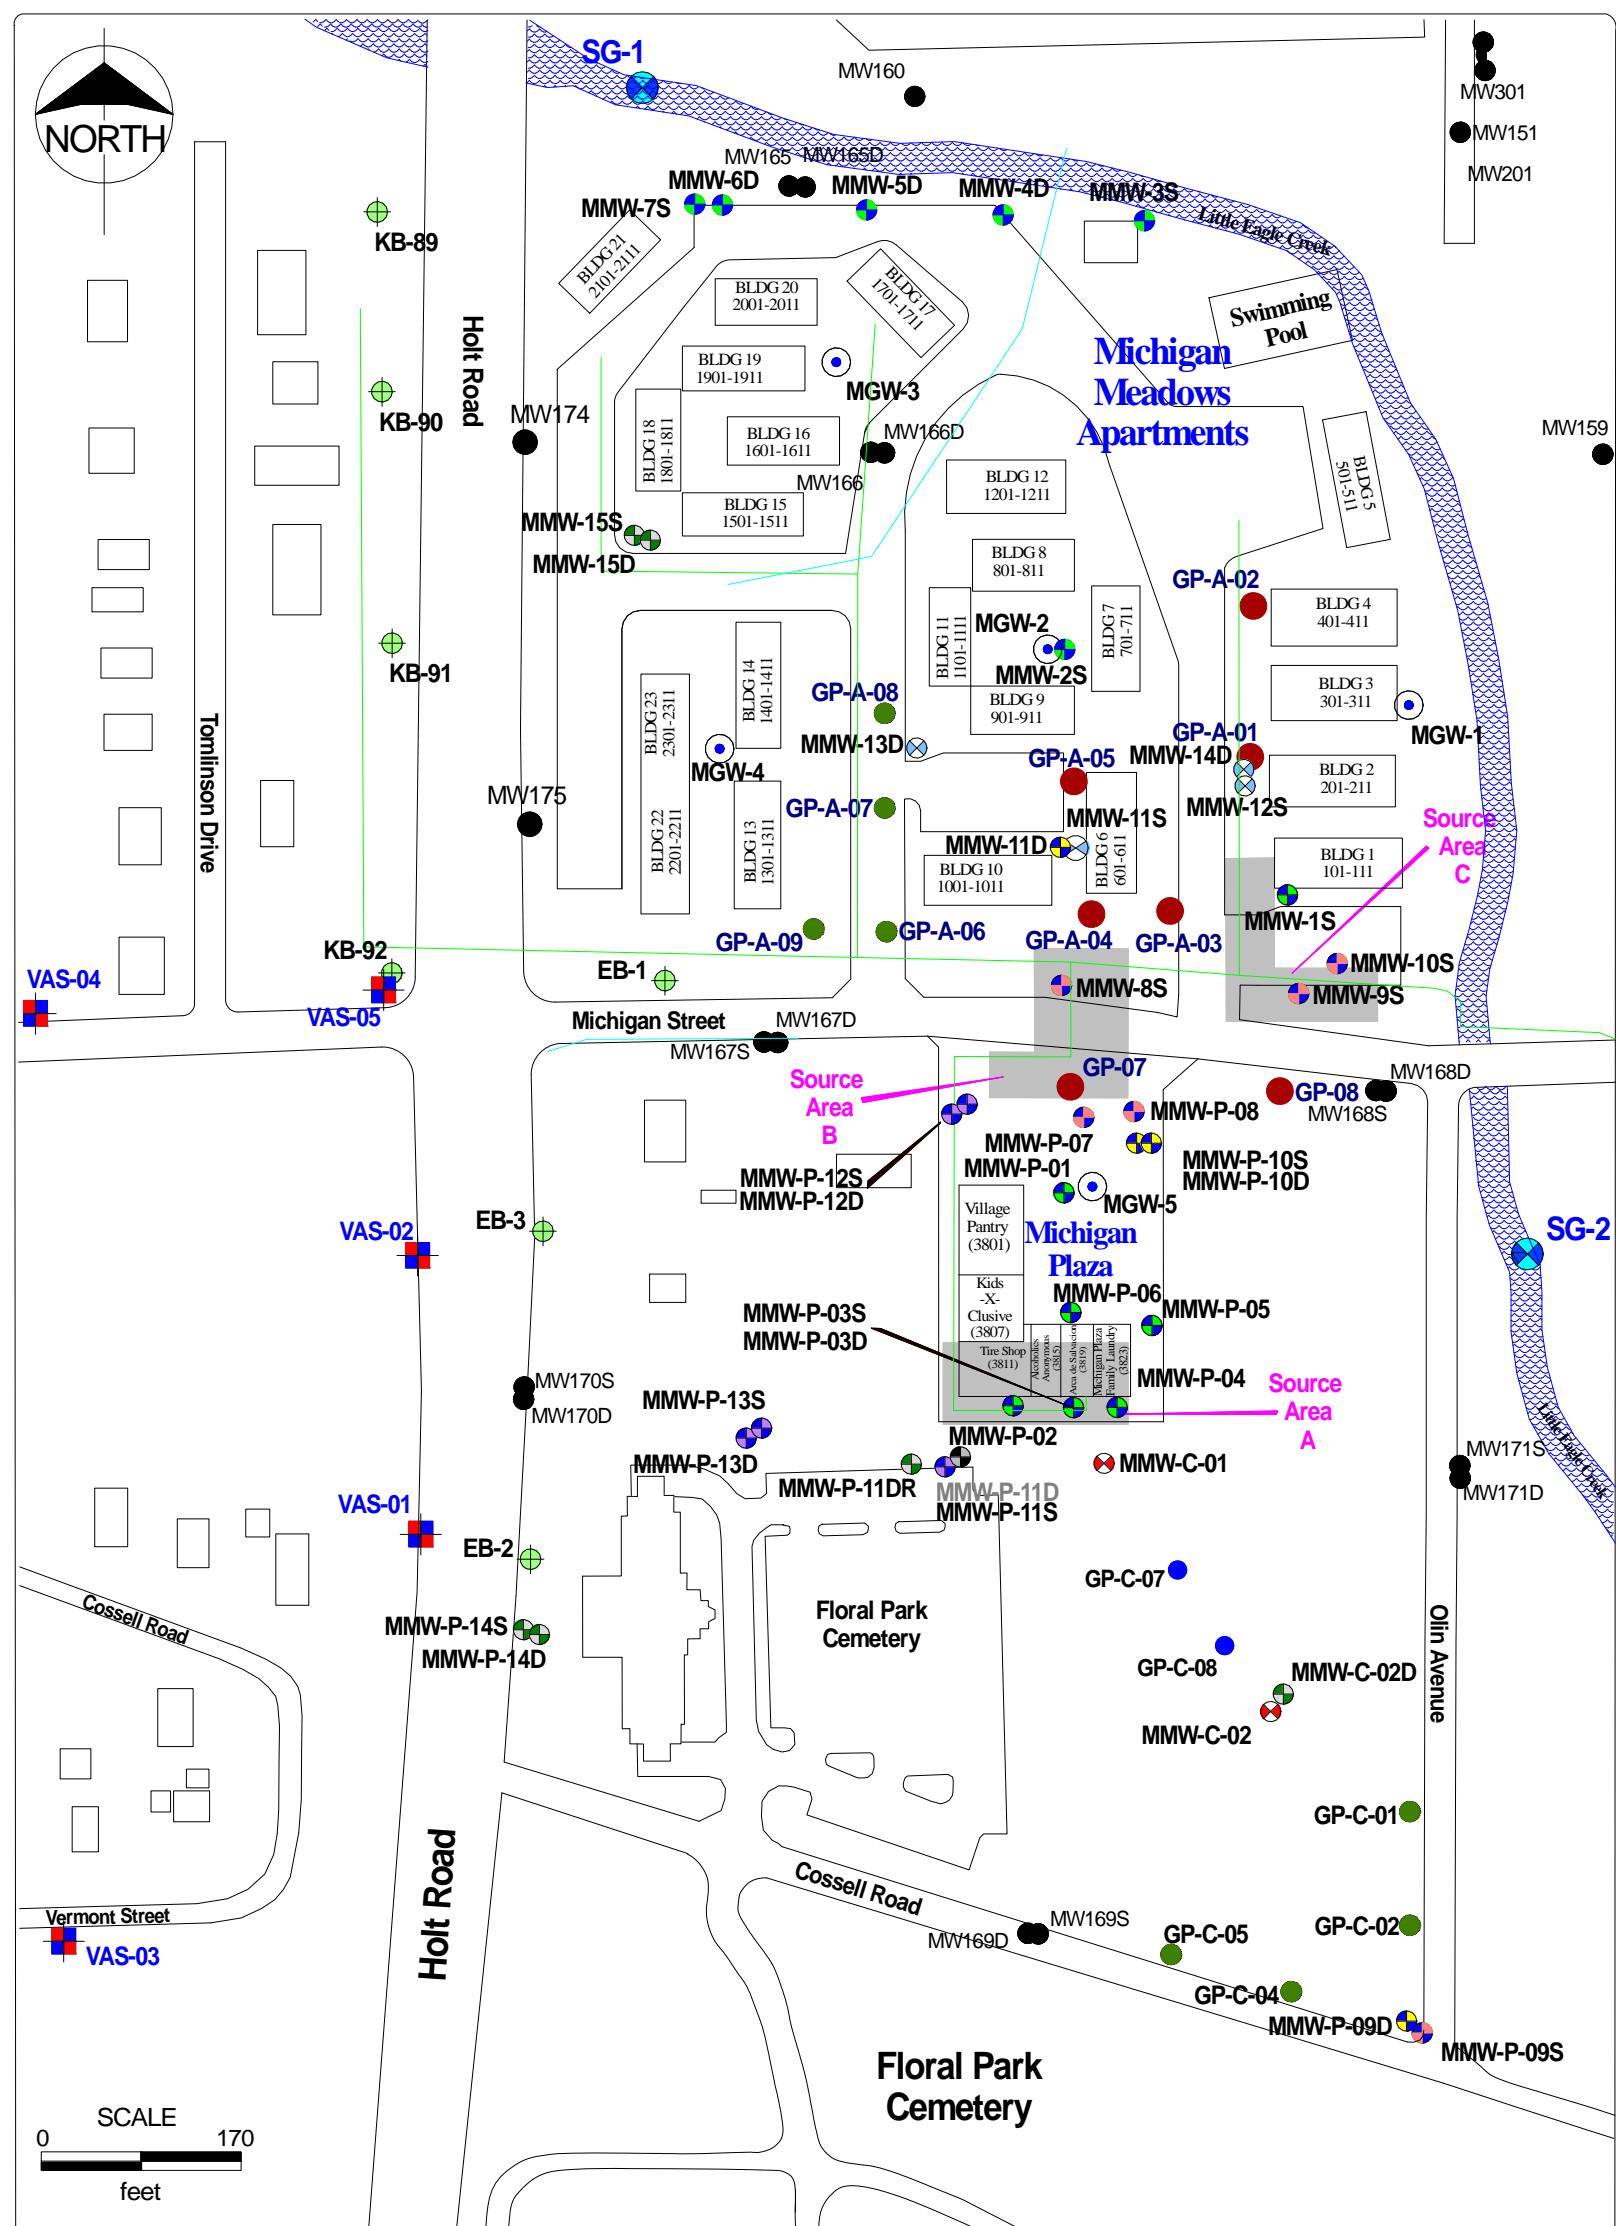

E

Sampling locations outlined in **GREEN** have been identified as "Indicator Compound Locations." These locations will be sampled quarterly for VOCs, Nitrate/Nitrite, Sulfate, and Chloride.

Gray shading indicates that no data is available. Lack of data is generally due to equipment malfunction in the field or absence of the parameter from the quarterly sample. Locations of the sites sampled are on ANNUAL basis. All other sampling locations are sampled quarterly.

* Indicates sampling locations at the Site sampled on an ANNUAL basis. All other sampling locations are sampled quarterly.

APPENDIX A

Lab Analytical Results

November 02, 2011

Ms. Sarah Webb
Mundell & Associates
110 South Downey Ave.
Indianapolis, IN 46219

RE: Project: MI Plaza / M01046
Pace Project No.: 5054017

Dear Ms. Webb:

Enclosed are the analytical results for sample(s) received by the laboratory on October 21, 2011. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Tina Sayer

QUALIFIERS

Project: MI Plaza / M01046
Pace Project No.: 5054017

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

LABORATORIES

PASI-I Pace Analytical Services - Indianapolis

PASI-K Pace Analytical Services - Kansas City

ANALYTE QUALIFIERS

E Analyte concentration exceeded the calibration range. The reported result is estimated.

M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

N2 The lab does not hold TNI accreditation for this parameter.

RE: Project: MI Plaza M01046
Pace Project No.: 5053952

Dear Ms. Webb:

Enclosed are the analytical results for sample(s) received by the laboratory on October 20, 2011. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Tina Sayer

QUALIFIERS

Project: MI Plaza M01046

Pace Project No.: 5053952

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

LABORATORIES

PASI-I Pace Analytical Services - Indianapolis

PASI-K Pace Analytical Services - Kansas City

ANALYTE QUALIFIERS

E Analyte concentration exceeded the calibration range. The reported result is estimated.

M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

N2 The lab does not hold TNI accreditation for this parameter.

RE: Project: MI Plaza M01046
Pace Project No.: 5053912

Dear Ms. Webb:

Enclosed are the analytical results for sample(s) received by the laboratory on October 19, 2011. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Tina Sayer

QUALIFIERS

Project: MI Plaza M01046

Pace Project No.: 5053912

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

LABORATORIES

PASI-I Pace Analytical Services - Indianapolis

PASI-K Pace Analytical Services - Kansas City

ANALYTE QUALIFIERS

M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

M3 Matrix spike recovery was outside laboratory control limits due to matrix interferences.

N2 The lab does not hold TNI accreditation for this parameter.

RE: Project: MI Plaza M01046
Pace Project No.: 5054083

Dear Ms. Webb:

Enclosed are the analytical results for sample(s) received by the laboratory on October 25, 2011. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Tina Sayer

tina.sayer@pacelabs.com

QUALIFIERS

Project: MI Plaza M01046

Pace Project No.: 5054083

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

LABORATORIES

PASI-I Pace Analytical Services - Indianapolis

PASI-K Pace Analytical Services - Kansas City

ANALYTE QUALIFIERS

B- Analyte detected in method blank but was not detected in the associated samples.

D4 Sample was diluted due to the presence of high levels of target analytes.

E Analyte concentration exceeded the calibration range. The reported result is estimated.

M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

M3 Matrix spike recovery was outside laboratory control limits due to matrix interferences.

N2 The lab does not hold TNI accreditation for this parameter.

Dear Sarah Webb:

Enclosed are the analytical results for sample(s) received by the laboratory on Thursday, October 27, 2011. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Heather Hauser JS 11/16/11

Accreditation ID:	11815	
Scope:	Non-Potable Water; Solid and Hazardous Waste	
Accreditor:	State of Connecticut, Department of Public Health, Division of Environmental Health	
Accreditation ID:	PH-0263	
Scope:	Clean Water Act (CWA) Resource Conservation and Recovery Act (RCRA)	
Accreditor:	NELAP: Texas, Commission on Environmental Quality	
Accreditation ID:	T104704453-09-TX	
Scope:	Non-Potable Water	
Accreditor:	State of New Hampshire	
Accreditation ID:	299409	
Scope:	Non-potable water	
Accreditor:	State of Georgia	
Accreditation ID:	Chapter 391-3-26	
Scope:	As per the Georgia EPD Rules and Regulations for Commercial Laboratories, Microseeps is accredited by the Pennsylvania Department of Environmental Protection Bureau of Laboratories under the National Environmental Laboratory Approval Program (NELAC).

RE: Michigan Plaza / M01046

Microseeps Workorder: 3112

Dear Sarah Webb:

Enclosed are the analytical results for sample(s) received by the laboratory on Thursday, October 27, 2011. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Heather Hauser (HS) 11/16/11

PROJECT SUMMARY

Workorder: 3112 Michigan Plaza / M01046

Workorder Comments

Samples were received approximately 9 days into the analysis holding time period. Samples 3112 (0001, 0006, 0008-0011, 0013, 0017-0018, 0024) were analyzed outside the hold time of 14 days from collection for the light hydrocarbons.

The delay was necessary to clarify issues between the laboratory and the customer, associated to the laboratories sample receiving procedures.

ANALYTICAL RESULTS QUALIFIERS

Workorder: 3112 Michigan Plaza / M01046

PARAMETER QUALIFIERS

- U Indicates the compound was analyzed for, but not detected.
- J Estimated concentration greater than the set method detection limit (MDL) and less than the set reporting limit (RDL).

Microseeps Project Number: 3112

Date: 10/27/11 Time of Receipt: 10:15 Receiver: Holan Young

Client: Mundell & Ass.

REASON FOR NON-CONFORMANCE:

1. MMW-8S: MEE vials: one broken; one left for analysis.
2. MMW-P-02: — same —
3. MMW-P-04: VFA vials: one broken.
4. MMW-P-05: MEE vials: one broken.
5. MMW-P-12S: ^{MEF} VFA vials: one broken.
6. MMW-P-13S: VFA vials: one broken.
7. Received 4 vials for MEF & 4 vials for VFA (marked MS & MSI) with time & date of Sample MMW-9S but without sample ID on. Just wanted to make sure they are MS & MSD for this sample.
8. Received vials (one broken) for VFA for sample MMW-P-04 ACTION TAKEN: but COC did not mark as VFA is needed for this sample.

Hi Sarah,

I have one more question for you in regards to this project. For sample MMW-P-04 we received vials for VFA (one of which was broken as you are already aware) but the COC does not indicate that VFA is needed for this sample. Are we running VFA on this sample?

Subject: RE: MI Plaza / M01046

Is there sufficient sample volume to complete the analyses?

Yes, as labeled on the COC, the MS/MSD are from sampling location MMW-9S.

Sent: Thursday, October 27, 2011 1:52 PM

To: Sarah Webb

Subject: MI Plaza / M01046

We received your samples today and had a few concerns:

1. MMW-8S MEE vials: 1 vial was broken leaving only one for analysis
2. MMW-P-02 MEE vials: 1 vial was broken leaving only one for analysis
3. MMW-P-04 VFA vials : 1 vial was broken
4. MMW-P-05 MEE vials: 1 vial was broken
5. MMW-P-12S: MEE vials: 1 vial was broken
6. MMW-P-13S: VFA vials: 1 vial was broken
7. We received 4 vials for MEE and 4 vials for VFA (marked MS and MSD) that had the same time and date of sample MMW-9S but without any sample ID on them. Are they the MS and MSD for sample MMW-9S?

Please advise how to proceed.

NS = Not sampled

Italic = Reported concentrations are estimated values (J-flagged values) or below laboratory detection limits. Concentrations of PCE, TCE, and cis-1,2-DCE are assumed to be one-half the laboratory practical quantitation limit (PQL). Concentrations of vinyl chloride are assumed to be 0.015 ppmv, representing the mean detected concentration below laboratory reporting limits.

NS = Not sampled

Italic = Reported concentrations are estimated values (J-flagged values) or below laboratory detection limits. Concentrations of PCE, TCE, and cis-1,2-DCE are assumed to be one-half the laboratory practical quantitation limit (PQL). Concentrations of vinyl chloride are assumed to be 0.015 ppmv, representing the mean detected concentration below laboratory reporting limits.

NS = Not sampled

Italic = Reported concentrations are estimated values (J-flagged values) or below laboratory detection limits. Concentrations of PCE, TCE, and cis-1,2-DCE are assumed to be one-half the laboratory practical quantitation limit (PQL). Concentrations of vinyl chloride are assumed to be 0.015 ppmv, representing the mean detected concentration below laboratory reporting limits.

Client Name: Mundell Project: MI Plaza/ Lab Work Order: 3112

Project: MI Plaza/
M01046

A. Shipping/Container Information (circle appropriate response)

Courier: FedEx UPS USPS Client Other: _____ Air bill Present: Yes No

Tracking Number: 7953 3631 2099

Custody Seal on Cooler/Box Present: Yes No Seals Intact: Yes No

Cooler/Box Packing Material: Bubble Wrap Absorbent Foam Other: _____

Type of Ice: Wet Blue None Ice Intact: Yes Melted

Cooler Temperature: 4.2°C Radiation Screened: Yes No Chain of Custody Present: Yes No

Comments: _____

B. Laboratory Assignment/Log-in (check appropriate response)

	YES	NO	N/A	Comment Reference non-Conformance
Chain of Custody properly filled out	✓			
Chain of Custody relinquished	✓			
Sampler Name & Signature on COC	✓			
Containers intact	✗	✓		Some broken
Were samples in separate bags	✓			
Sample container labels match COC	✓			
Sample name/date and time collected	✓			
Sufficient volume provided	✓			
Microseeps containers used	✓			
Are containers properly preserved for the requested testing? (as labeled)	✓			
If an unknown preservation state, were containers checked? Exception: VOA's coliform			✓	
Was volume for dissolved testing field filtered, as noted on the COC? Was volume received in a preserved container?			✓	

Comments: _____

Cooler contents examined/received by: HCL Date: 10/27/11

Project Manager Review: JS Date: 11/1/11

NS = Not sampled

Italic = Reported concentrations are estimated values (J-flagged values) or below laboratory detection limits. Concentrations of PCE, TCE, and cis-1,2-DCE are assumed to be one-half the laboratory practical quantitation limit (PQL). Concentrations of vinyl chloride are assumed to be 0.015 ppmv, representing the mean detected concentration below laboratory reporting limits.

NS = Not sampled

Italic = Reported concentrations are estimated values (J-flagged values) or below laboratory detection limits. Concentrations of PCE, TCE, and cis-1,2-DCE are assumed to be one-half the laboratory practical quantitation limit (PQL). Concentrations of vinyl chloride are assumed to be 0.015 ppmv, representing the mean detected concentration below laboratory reporting limits.

NS = Not sampled

Italic = Reported concentrations are estimated values (J-flagged values) or below laboratory detection limits. Concentrations of PCE, TCE, and cis-1,2-DCE are assumed to be one-half the laboratory practical quantitation limit (PQL). Concentrations of vinyl chloride are assumed to be 0.015 ppmv, representing the mean detected concentration below laboratory reporting limits.
